

DPF REVIVAL

DPF DRYER

Drying machine for particulate filters

DRYING - CONTROL - PROTECTION

A professional solution for removing moisture from particle filters with maximum efficiency and safety.

Controlled heat to speed up the process

Professional operating temperature

Easy to move around the workshop

Greater safety during operation

Technical specifications and drying control

The **DPF DRYER** is the ideal follow-up to filter cleaning.

It removes moisture from the filter using controlled hot air, helping to reduce waiting times and improve the overall service delivery.

Power
6 Kw

Highest temperature
200 °c

Approximate weight
65 kg

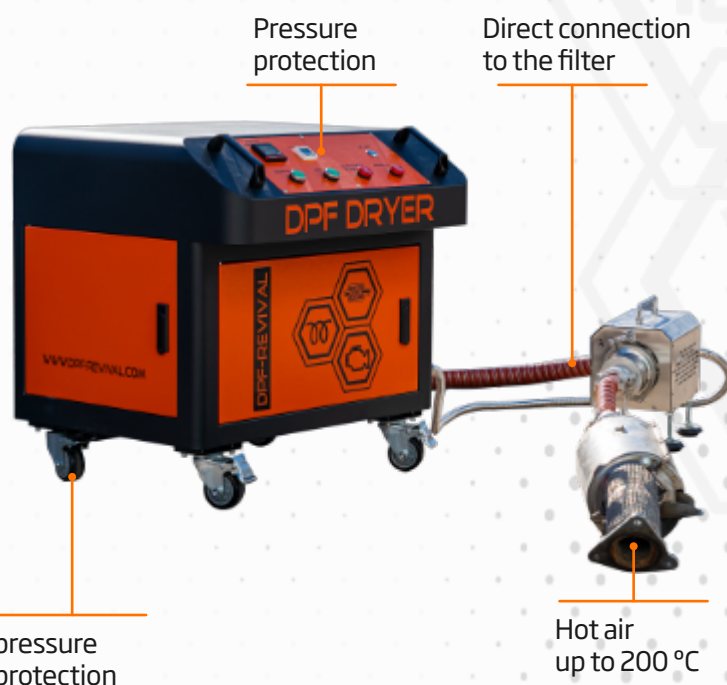

Dimensions
720 x 650 x 700 mm

System
hot-air drying

Security
pressure protection

Control
Clear
and straight for
ward operation

Security
Protection during
the process

Profitability
Improve
productivity in the
workshop
